...

This is quite likely the shortest commercial railroad...in the world. Less than 200 ft long and built solely to satisfy the requirements of an import treaty, the Bayside Canadian Railway is a huge time/fuel saver for those of us who transport frozen fish to US markets.

The wording in the treaty states the fish has to travel "just so far" by train before it can be hauled stateside...and apparently a couple hundred feet is just far enough lol

5y

Jody Knowles

Sure as hell beats the days we had to sit around macadam and saint john all day.
